Abstract: The concerning decline in Japanese population caused by the lower ratio of births compared to mortality, had caused an alarmingly increasing number of elders and low numbers of youngsters in Japan. Due to the lack of professional workforce in productive ages, Japan government had been forced to recruit foreign workforce to work in Japan. One of several countries who have been constantly supplying Japan with the much needed workforce is Indonesia. Every year, no less than 25.000 workforces has been sent to Japan, and the number hasn't shown any sign of declining, even amidst the dangerous pandemic that struck both countries in the late 2 years. One of the specific skilled workforces that constantly in high demand is kaigo and kango, or medical nurses. Nevertheless, albeit being well trained in medical care, most of the candidates need to be trained to speak Japanese first, which would take more time and costs before they can be employed. One among several method to decrease the time and costs to train them Japaese is to provide a short but adequate crash course in Japanese conversation and etiquette.

Keyword: kango ; kaiwa ; kotoba ; training

1. Introduction

Since 2010, Japan has seen a steady decline of population. At 2010, Japanese population is around 128 million people, but per January 2021, there are only 125 million people, with 2,5 million among them are foreigners who work and lives in Japan. The high rate of mortality, among them are the youngsters, was not balanced by the rate of birth. This condition has caused the increasing number of elder population, partly due to the advance of medical technology and services and the Japanese healthy lifestyle, and the declining number of professional workforce in productive age. If the population decline continues, it is allegedly predicted that by the year of 2200, the Japanese would have probably extinct.

Back to the problem at hand, nowadays, Japan is still recruiting hundreds of thousands of workforce from other country, namely China, Phillipines and even Indonesia. Every year, Indonesia sent no less than 25.000 workforces to Japan, to work in various range of skill and professions. Among them are those who were trained as Kango or Kaigo, or in English, nurses. Not only nurses for medical treatment in hospitals and such are needed, but also nurses (caretakers) whose duty is to take care of the elder in Japan.

While skilled and trained nurses and caretakers can be provided, since they have to work and stay in Japan, these worforces requires training in at the very least basic Japanese and Japanese language used in medical field. The level of Japanese language proficiency needed to work and stay in Japan normally took months or maybe even years to procure. But, due to the lack of workforce, further worsen by the pandemic which befallen both Japan and Indonesia the needs for Kango and Kaigo workforce becoming more and more dire. Therefore, there's no time and cost that can be wasted in order to properly trained future Kango dan kaigo canditates. One of several solutions that can be offered is a crash course of basic Japanese skill, namely conversation, both ini workplace and daily life, and training about Japanese manner, etiquette, and work habits. This can be achieved in shorter time than it is to completely train them, both when they arrive in Japan, and before they depart.

This article will discuss the examples of things that needed to be taught to Kango and Kaigo candidates prior to their departure to Japan.

2. Method

This article will be written using descriptive analysis method, i.e. the data will be presented and analyzed in order to obtain a conclusion which is the answer of the problem/question this article try to solve.

3. Results and Discussions

3.1 Sociolinguistics

Nababan (1991: 2) in Sanyoto (2015: 3) states that sociolinguistics is the study or discussion of language in relation to speakers of that language as members of society. It can also be said that sociolinguistics studies and discusses societal aspects of language, especially the differences (variations) that exist in language related to societal (social) factors. The same thing was revealed by Crystal in Sanyoto (2015: 3), which states that sociolinguistics is a branch of linguistics that examines the way language is integrated with society (with uniqueness, with references, such as race, ethnicity, class, sex and social institutions).

3.2 Register

Wardhaug in Sanyoto (2015: 3-4) suggests that register is a set of vocabulary related to the characteristics of work and groups. Wardhaug provides examples of vocabulary used by surgeons, airline pilots, bank managers, sales clerks and so on. The same thing is also expressed by Pateda (1990: 64) in Sanyoto (2015: 4) which explains that register is the use of language associated with one's job.

3.3 Register of Nursing Language (*Kango*) in Japanese

Based on the theory of the register above, in this analysis the writer will describe the nursing language register (*kango*) in Japanese which is classified into 3 types, the examination register (*kensa*), the health examination register (*shinsatsu*) and the care register in the form of action (*shochi*).

3.3.1 Register of Examination (*Kensa*)

In the examination register (*kensa*) the vocabulary that will be presented is related to body examinations such as measurement of body weight and height (*shinchou / taijuu kensa*), blood pressure (*ketsuatsu kensa*), blood tests (*ketsueki kensa*), physical examination (*shintai kensa*), examination vital signs (*smell*), examination of urine / feces (*nyou kensa / kenben*), and examination of the stomach (*i no kensa*).

- | | | |
|----|--|------------------------------------|
| a. | Measurement of body weight and height (<i>shinchou/taijuu kensa</i>) | |
| | <i>Shincou o hakaru</i> | : Measure your height |
| | <i>Taijuu o hakaru</i> | : Measure your weight |
| | <i>Shintai sokutei</i> | : physical measurement |
| | <i>Taijuu sokutei</i> | : Weight measurement |
| b. | Blood pressure check (<i>ketsuatsu kensa</i>) | |
| | <i>Ketsuatsu o hakaru</i> | : Measure blood pressure |
| | <i>Myaku o hakaru</i> | : Measure the pulse |
| | <i>Ketsuatsu ga takai</i> | : High blood pressure |
| | <i>Ketsuatsu ga hikui</i> | : Low blood pressure |
| | <i>Kouketsuatsu</i> | : High blood pressure |
| | <i>Teiketsuatsu</i> | : Low blood pressure |
| c. | Blood check (<i>ketsueki kensa</i>) | |
| | <i>Rakuni suru / rirakkusu suru</i> | : Relax |
| | <i>Shokuji o nuku</i> | : Skip the meal |
| | <i>Ketsueki kensa</i> | : Blood test |
| | <i>Chi o toru / saiketsu o suru</i> | : Take blood |
| | <i>Chi ga deru</i> | : Blood |
| | <i>Ase ga deru</i> | : Sweat |
| | <i>Chi ga tomaru</i> | : Blood stops |
| d. | Physical examination (<i>shintai kensa</i>) | |
| | <i>Usubuse ni naru</i> | : Be lying down |
| | <i>Aomuke ni naru</i> | : Lie on your back |
| | <i>Jitto suru</i> | : Stay still |
| | <i>Teiki kensa</i> | : Periodic inspection |
| | <i>Shiryoku kensa</i> | : Vision test |
| | <i>Ningen dokku</i> | : Human dock |
| | <i>Rentogen</i> | : Roentgen |
| | <i>Ekoo / chouompa kensa</i> | : Ultrasonography (USG) |
| | <i>Emuaaruai / jiki kyomei eizouhou</i> | : Magnetic Resonance Imaging (MRI) |
| | <i>Shiitii / konpyuuta dansou satsuei</i> | : Computer Tomography (CT) |

	<i>Nouha</i>	:	Electroencephalogram
	<i>Mammogurafii</i>	:	Mamography
	<i>Kensa nyuuin</i>	:	Inspection hospitalization
e.	Examination of vital signs (<i>baitaru sain</i>)		
	<i>Myaku / myakuhaku</i>	:	pulse
	<i>Myaku ga osoi</i>	:	Slow pulse
	<i>Kodou ga osoi</i>	:	Slow heartbeat
	<i>Myaku ga hayai</i>	:	Fast pulse
	<i>Kodou ga hayai</i>	:	Beat fast
	<i>Myaku ga midareru</i>	:	The pulse is disturbed
	<i>Shindenzu ga midareru</i>	:	ECG is disturbed
	<i>Tan</i>	:	phlegm
	<i>Kokyuu</i>	:	Breathing
	<i>Iki o suu</i>	:	take a breath
	<i>Iki o tomeru</i>	:	Hold your breath
	<i>Iki o haku</i>	:	take a breath
	<i>Shinkokyuu o suru</i>	:	Take a deep breath
	<i>Taion o hakaru</i>	:	Measure body temperature
	<i>Taionkei o hasamu</i>	:	Hold the thermometer
f.	examination of urine / feces (<i>nyou kensa / kenben</i>)		
	<i>Nyou ga nigoru</i>	:	Urine is muddy
	<i>Ketsunyou</i>	:	Hematuria
	<i>Tounyou</i>	:	Diabetes
	<i>Ketsuben</i>	:	Blood in stool
	<i>Geketsu</i>	:	Bloody stool
	<i>Ben ga katai</i>	:	Stool is hard
	<i>Ben ga yawarakai</i>	:	The stool is soft
g.	gastric examination (<i>i no kensa</i>)		
	<i>Bariumu</i>	:	Barium
	<i>Geppu o suru</i>	:	Burp
	<i>I kamera o nomu</i>	:	Swallow the Gastroscope
	<i>Rentogen o toru</i>	:	Take a roentgen
	<i>Shindenzu o toru</i>	:	Take an electrocardiogram
	<i>Emuaaruai o toru</i>	:	Take a MRI
	<i>Ekoo o toru</i>	:	Take a USG

3.3.2 Register of Medical examination (*Shinsatsu*)

In the medical check-up register (*shinsatsu*), the vocabulary that will be presented is related to medical history such as medical history interview (*monshin*) and symptom conveying (*shoujou o tsutaeru*).

a.	Medical history interview (<i>monshin</i>)		
	<i>Toshi</i>	:	Age
	<i>Kikon; kekkon shite iru</i>	:	married
	<i>Mikon</i>	:	Unmarried
	<i>Jibyoo</i>	:	Chronic condition
	<i>Byooreki</i>	:	Medical history
	<i>Naifukureki</i>	:	Oral calendar
	<i>Kenkoo hoken</i>	:	Health insurance
	<i>Umaretsuki</i>	:	Inborn
	<i>Taishitsu</i>	:	body condition
	<i>Kanja-san</i>	:	Patient
	<i>Riyoosha-san</i>	:	People who are receiving treatment
b.	Convey symptoms (<i>shoujou o tsutaeru</i>)		
	<i>Atama ga itai; atamaita; zutsuu</i>	:	headache
	<i>Fura-fura suru</i>	:	Flutter
	<i>Onaka ga itai; onakaita; haraita; fukutsuu</i>	:	Tummy hurts
	<i>Seki (o) suru</i>	:	Cough
	<i>Hanamizu; hana</i>	:	Runny nose
	<i>Samuke ga suru</i>	:	chills
	<i>Netsu ga aru</i>	:	have a fever
	<i>Netsu ga deru</i>	:	become feverish

<i>Hatsunetsu</i>	:	Fever
<i>Koonetsu</i>	:	High fever
<i>Binetsu</i>	:	Low-grade fever
<i>Heinetsu</i>	:	Normal heat
<i>Shakkuri</i>	:	hiccup
<i>Kushami (o) suru</i>	:	sneeze
<i>Haku; modosu</i>	:	Vomiting
<i>Hakike</i>	:	nausea
<i>Kaze (o) hiku</i>	:	cold
<i>Utsuru</i>	:	Contagious (disease)
<i>Futoru</i>	:	Get fat
<i>Yaseru</i>	:	Lose weight
<i>Bempi</i>	:	constipation
<i>Geri</i>	:	diarrhea
<i>Douki</i>	:	Palpitations
<i>Mahi</i>	:	paralysis
<i>Seikatsu shuukanbyoo</i>	:	Lifestyle-related diseases
<i>Eiyuu shicchoo</i>	:	malnutrition
<i>Hirou; tsukareru; tsukare</i>	:	fatigue; Tired
<i>kaoiro ga warui</i>	:	Look sick
<i>atama/karada ga omoi</i>	:	Heavy head / body
<i>memai</i>	:	dizzy
<i>noboseru</i>	:	headache
<i>aruregi ga aru</i>	:	I have allergies
<i>Muneyake; imotare</i>	:	Heartburn; Stomach leaning
<i>onaka ga goro-goro suru</i>	:	stomach beeping loudly
<i>zeezee iu</i>	:	sigh
<i>iki ga kurushii</i>	:	Suffocating
<i>iki ga tsumaru</i>	:	Clog breath
<i>ashi ga tsuru</i>	:	Leg cramps
<i>shibireru</i>	:	Numb
<i>mukumu</i>	:	Swelling
<i>katakori</i>	:	Stiff shoulder
<i>hieshoo</i>	:	Cold sensitivity

3.3.3 Register of Care (*Shochi*)

In the care register (*shochi*), the vocabulary that will be presented is related to the vocabulary that is generally used in actions to get treatment, such as:

<i>Chikutto suru</i>	:	Stinging
<i>Shochidai</i>	:	Treatment table
<i>Tenteki (o) suru</i>	:	Intravenous
<i>Hari</i>	:	needle
<i>Chuusa (o) suru; chuusa (o) utsu</i>	:	inject
<i>Shochi shitsu</i>	:	Treatment room
<i>Kyuunyuu (o) suru</i>	:	inhale; suck
<i>Kyuuin</i>	:	suction
<i>Moreru</i>	:	leaking
<i>Budoutou</i>	:	glucose
<i>Shochi suru</i>	:	To treat [medical]
<i>Tenteki kaato</i>	:	Intravenous cart
<i>Shoudoku suru</i>	:	disinfect
<i>Sakkin</i>	:	Sterilization
<i>Shafutsu</i>	:	Boil disinfection
<i>Nuku (hari/ito o ~)</i>	:	Pull out (needle/yarn)
<i>Teate</i>	:	allowance (medical)
<i>Houtai</i>	:	bandage
<i>Houtai koukan</i>	:	Bandage change
<i>Bansoukou</i>	:	Adhesive plaster
<i>Kateeteru</i>	:	catheter

<i>Kuda</i>	:	tube
<i>Kotton</i>	:	cotton
<i>Gaaze</i>	:	gauze
<i>Membou</i>	:	cotton bud
<i>Arukooru</i>	:	alcohol
<i>Arukooru men</i>	:	Alcohol cotton
<i>Tsukaisute</i>	:	disposable
<i>Pinsetto</i>	:	tweezers
<i>Hasami</i>	:	Scissors
<i>Ito</i>	:	yarn
<i>Kyuukyuu bako</i>	:	First aid kit

4. Conclusion

Based on the analysis described above, it can be concluded that the nursing language register (*kango*) in Japanese is divided into 3 types, such as examination register (*kensa*) which discusses vocabulary commonly used in body examinations, health examination registers (*shinsatsu*) which discusses the vocabulary commonly used for medical history, and the care register (*shochi*) which discusses the vocabulary used to carry out treatment actions.

5. Acknowledgments

This article is made possible by the support, cooperation, helps and sponsorship of all parties, individuals and organization involved. Therefore, deep gratitude is owned to Widyatama University for the support, sponsorship and cooperation, Dharma Husada University for their invaluable cooperation and support, and to everyone whose hard works made this project a success.
